Introduction

PC to HDMI 1080p Scaler Box is designed to upscale video from a PC input source to a digital HDMI output at a range of different resolutions up to 1080p/WUXGA. The unit is particularly useful for those who want to display the image from their PC on a high definition TV at a high resolution. The unit will accept other VGA inputs as well, including devices such as set-top boxes.

Besides video upscaling, the scaler box also converts input audio signal from Toslink or L/R to both digital and analog formats, then output to HDMI combining with the video, Toslink and L/R simultaneously.

The unit has a comprehensive OSD menu that allows you to select a variety of output resolutions and make adjustments for the best picture quality. With the OSD you can control the size of the displayed image with options including Full, Underscan, Overscan and Panscan.

You also use the OSD to select the appropriate output resolution for your display - with the unit supporting PC resolutions including VGA, SVGA, XGA, SXGA, UXGA, WXGA, WSXGA, WUXGA, and SD/HD resolutions including 480i/p, 576i/p, 720p, and 1080i/p. The unit can also automatically detect the factory setting of the connected display and output the corresponding resolution when the Native output is selected.
The PC to HDMI 1080p Scaler Box is compatible for use with a HDMI/DVI cable.

Features

- HDMI 1.2, HDCP 1.1 and DVI 1.0 compliant.
- Scales any PC resolutions to PC (VGA - WUXGA)/ HD (480i - 1080p) resolutions.
- Automatically detect the factory setting of the connected display and output the corresponding resolution and refresh rate, when the NATIVE output is selected.
- Provides output picture adjustment on contrast, brightness, hue, saturation, sharpness, RGB (color tone) level and aspect ratio size.
- Supports high resolution output (See "Support Resolution" section for reference.):
- PC: VGA, SVGA, XGA, SXGA, UXGA, WXGA, WSXGA, WUXGA. SD/HD: 480i, 576i, 480p, 576p, 720p, 1080i and 1080p
- Supports stereo LPCM analog/digital audio input and stereo LPCM analog/digital output. Simply select among the audio input sources in the OSD menu, then output the audio to HDMI, TOSLINK(optical fiber) and phone jack simultaneously.

To reset the unit, press and hold the MENU button then re-plug the DC power into the unit to set the unit back to factory default, with output resolution as NATIVE. This feature is also useful when the output is scaled to a resolution not supported by the connected TV/monitor so no picture is shown, because the NATIVE resolution can guarantee the proper (might not be the best) output.
