USB to HDMI Converter w/RJ45

- ID# 706

Operation Manual

Introduction

The Ethernet and USB to HDMI Converter allow users to use TV as the PC primary display with keyboard and mouse at hand for Internet browsing, using Microsoft Office, listening music and watching movies from a PC on the network. Simply connect the TV to the device and then plugging the device into an Ethernet network, this TV instantly become the PC monitor with keyboard and mouse for any computer on that network. The device will enable this TV to be used as if it was directly connected to the computer. The distance between TV and computer can be 100 meters apart within the same LAN. The device removes the limitations of running expensive audio and video wiring in

long distance digital signage extending. All that is needed is an Ethernet network. Multiple users will have the ability to access the same TV without physically connect with computers. This will eliminate the distance limitations of conventional audio and video cabling for easy AV sharing between computers.

Features

- 1. Move the complete PC operation environment into TV with 100 meters away from computer. Original PC monitor can different content with TV.
- 2. Allow TV as the PC primary display with keyboard and mouse at hand for Internet browsing, using Microsoft Office, listening music and watching movies from a PC on the network.
- **3.** Extend or mirror video through network or USB cable to HDMI display, including both video and audio output signals.
- 4. Share HDMI displays with multiple users through your existing office or home IP network.
- 5. Add a HDMI display to your computer through a USB 2.0 port.
- 6. Supports mirror and extended video modes.
- 7. Friendly interface for easy configuration and monitoring.

System Requirements

- 1. System Hardware Requirements: 2.4 Ghz CPU with 1 GB RAM for optimal performance
- 2. Operating Systems:
- 3. Windows 2K SP4
- 4. Windows XP Home or Professional 32 bits SP2
- 5. Windows Vista 32 bits
- 6. Extending through a USB port:
- 7. Available USB 2.0 port with USB to mini USB cable
- 8. Extending through a network:
- 9. Available Ethernet port on home, business or office network with RJ-45 cable
- **10.** Keyboard and Mouse for extra pair of control tool

Software Installation

USB device driver

Press "XP_VS_Setup.exe" to install USB device driver. After install the driver, select "Yes" to restart the computer.

Operating Functions and Controls

Front Panel

1. USB Port: Connect USB device into USB port such as, USB Hard Drive, USB web camera, Keyboard or Mouse. *Note:*

These two USB ports can't extend with other USB Hub, otherwise it will cause the system failure to detect the external USB Hub.

Before removed the USB device, user need to follow USB device safely remove hardware procedure to remove the device, otherwise, it will cause the system crash down.

2. Mini USB IN: Support extends or mirror video through USB cable to HDMI display, including both video and audio output signals.

3. Ethernet IN: Connect to home IP router or PC Ethernet port. When connect directly to the PC Ethernet port, user need to set manually the Internet Protocol (TCP/IP) to "169.254.10.1". If connect to IP router, the system will automatically be connected and user do not to set up Internet Protocol.

4. Input connection switch: Switch to select the PC source from Mini USB port or through Ethernet port.

5. Reset IP: Press to reset Ethernet IP address only if the system's IP address is incorrect

1. Power: Plug the 5V DC power supply into the unit and connect the adaptor to AC wall outlet.

2. HDMI out: Connect HDMI output port to the HDMI display.

3. EDID control switch: Default factory setting is "ON", leave as it is if the display is properly. If the display has built-in native EDID, the screen will show display's resolution

Rear Panel

and user can selected from SCREEN RESOLUTION. When switch OFF, the screen will show internal EDID and user can selected from SCREEN RESOLUTION. *Note:*

When switch from ON to OFF position, user need to go to "Launch USB Server in " to disconnect DisplayLink *USB to* HDMI and reconnect it again. If not, the system will stay in ON stage. However, from OFF to ON the user do not need to reconnect the *DisplayLink USB* to *HDMI* driver, the system will automatically switch to ON stage.

- 4. LINK LED Indicator: Blue LED will illuminate when the source signal is connected with the input port. Blue LED blinking means its doing signal connection.
- 5. Power LED Indicator: Red LED will illuminate when the power is connected.

Press "Launch USB Server" to connect DisplayLink USB to HDMI driver and C-Media USB Sound Device. After connect the system the front logo will change from GREEN sign to ORANGE sign.

= COL-150ETH-0	00001 (169.254.10.10) USB to HOM	
C+Media INC	USB Sound Device	

Double click on the GREEN sign, the system will connect the devices and after connect successfully it will turn to ORANGE sign. When connect other devices with USB port, "Launch USB Server" will detect it and show out a GREEN sign. Double click the GREEN sign to connect the device(s) in order to activate and use it.

Using DisplayLink Manager

> After the driver is installed, a utility (DisplayLink Manager) will automatically appear in the system tray. The utility allows you to quickly change the settings and resolution for DisplayLink Manager. Right-clicking the icon will bring out the context menu.

Launch USB Server

• Screen Resolution: Select the screen resolution

(available only in extended mode). Note: When the display has built-in native EDID the screen will show display's resolution, but if no built-in EDID the screen will have the follow resolution.
